OnlineMedsource Offers Web-Based Patient Health Records

(Norman, OK) – Physicians and patients in some areas are enjoying the benefits of an online interactive patient health information system, thanks to OnlineMedsource, Inc. in Norman, Oklahoma. According to Agi Lurtz, President of OnlineMedsource provides physicians a way to pre-register patients. “A patient may record their health history, medication and special needs from the comfort of their own home,” Mrs. Lurtz said. If their physician is an OnlineMedsource member, they can send the information to their doctor online.

OnlineMedsource does not charge any fee for individuals wanting to store their information in the service if their doctor is not yet a member. “If their doctor is a member,” Lurtz added, “the physician can then review the history and become aware of current issues before the patient even arrives at the office.

The key is that OnlineMedsource has developed an online, interactive web-based medical records process that is very secure and accessible. “Electronic medical records systems are not new.” Lurtz added. “The difference is that we maintain the records online, safe from tornadoes, hurricanes and other disasters. According to Agi, physicians and patients can retrieve medical records from anywhere they can access the web, even when they are out of the office or away from home.

Healthcare providers across America are working to meet the 2014 deadline for transition to electronic health records mandated by the President. The OnlineMedsource solution meets these mandates today. Unlike so many electronic systems, there is no equipment or software to buy. “As long as you can access the internet, you can access this service,” Mrs. Lurtz said.

One of the most popular features of the service is that the system includes development of a website specific for the physician’s practice. “Everything is customized to the practice, including the replication of physician forms, maps, office hours, everything,” Lurtz concluded. “No hidden fees, no equipment to buy, no software to install or learn. What could be better?”

OnlineMedsource Announces Web-Based First Responder Service

OnlineMedsource will begin testing an online emergency medical records access system beginning the first week in April. The company, located in Norman, Oklahoma, has been providing an online interactive patient health information system for patients and physicians for more than a year. This new service is intended to give first responders access to an individual's medical record, in the field under emergency conditions.

According to Agi Lurtz, "The growing use of mobile computer technology by law enforcement and emergency medical services makes it possible for them to access key medical information when seconds count. Depending upon how quickly the tests progress, we will begin marketing the service before the end of 2006. "We expect to complete tests this summer and begin enrolling communities in September."

"We have a vision that this service will work hand in hand with the expanded 911 system currently being implemented in central Oklahoma. The cost is extremely affordable, making it attractive to small towns and large cities alike. "One thing that attracts cities on strict budgets is that there is no equipment to buy, no software to acquire or install, and no maintenance fees."

OnlineMedsource will continue to develop systems for other agencies and organizations that have need of medical services. "Our strategy is to keep listening and looking for places and people who need safe and secure to medical information," Lurtz added. She stated that OnlineMedsource intends to develop, test and implement a new feature at least three or four times each year.

"When you are in the medical arena, you have to stay vigilant, on top of the ever-changing demands and needs of the population", said Mrs. Lurtz. "Offering new while improving existing services for our members keeps us ahead. We like the challenge and our members and the patient community counts on us to meet their needs."
